Video preview

LIVE  
FILE FORWARD

The screenshot shows the AVIWEST StreamHub interface. At the top, it displays 'AVIWEST StreamHub' and 'HEVC' encoding. The main area features a 'Video preview' window showing a live stream of a person on a skateboard. To the right of the preview is a graph showing stream data over time. Below the preview are controls for 'Live Profile', 'Video Input', 'Video Frequency', 'Resolution', 'Latency', 'Video Bitrate Mode', and 'Audio Mode'. A 'Stream information detail' table is also visible, showing 'Dropped Packets' and 'Bitrate' for both Video and Audio. On the right side, there are sections for 'IP Outputs' and 'Streaming out (user configurable)' with options for Facebook, YouTube, Twitch, RTSP Server, and SRT Server.

Category	Dropped Packets	Bitrate
Video	0	6.1 Mb/s
Audio	0	132 Kb/s

Streaming out  
(user configurable)

Cloud Record

100 GB

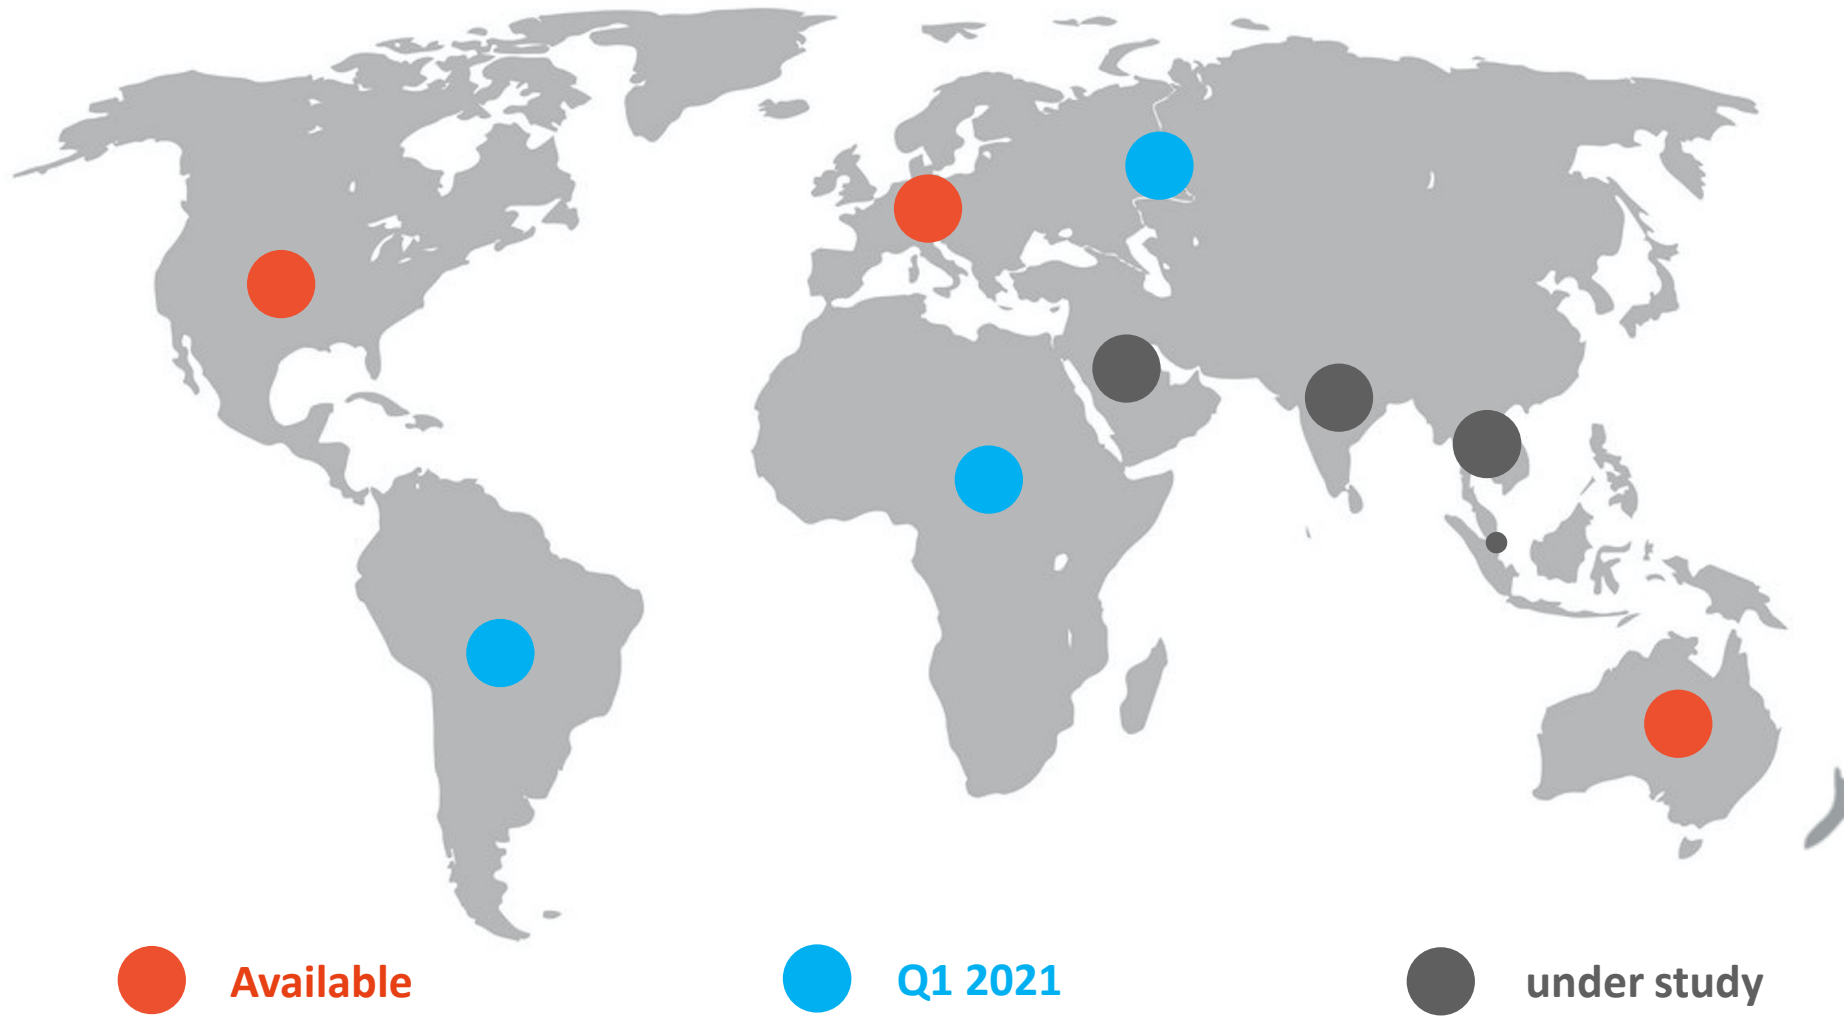

One source  
Multiple deliveries

The screenshot displays the AVIWEST StreamHub interface. On the left, a small video thumbnail of a skateboarder is shown with an orange arrow pointing to the 'Inputs' section. The 'Inputs' section lists '1 SST My\_BeOnAIR'. The main area shows a live stream player with a video of the skateboarder. Below the player, the 'Live Profile' is visible, including settings for Video Input (PATTERN), Video Frequency (720p50), Resolution (DYNAMIC), Latency (2.0 s), Video Bitrate Mode (VBR), and Audio Mode (1 x STEREO). A central graph shows stream data with a peak of 8 Mb. On the right, the 'IP Outputs' section lists several destinations: FACEBOOK RTMP, YOUTUBE RTMP, TWITCH RTMP, RTSP SERVER, and SRT SERVER. Each output has a power button and a dropdown menu. Orange arrows point from each output to a cluster of social media icons (Facebook, Twitter, YouTube, Google+, LinkedIn) on the far right.
